Market Signals

What it is

An internal web app that runs the front end of Move's client-acquisition funnel in one place. Think of it as a smart assistant that has read all of Move's playbooks and real sent proposals, and does the first draft of the busywork — so you can focus on the client. It works in Move's own voice and format, and every output is labeled so you always know whether the AI or the built-in logic wrote it.

1 Lead Qualifier

Score any prospect against Move's ideal client profile, with reasons and a CRM-ready summary.

2 Call Prep Engine

Turn intake answers into a one-page battle card: pains, questions, service path, and angle.

3 Proposal Studio

Go from discovery notes to a polished, on-brand proposal, section by section, with your approval.

4 Market Signals

A live read on DTC demand, with plain-English indicators and ready-to-post campaign angles.

The screenshot displays the MOVE CA ENGINE web application. The interface is dark-themed with a sidebar on the left containing navigation links: Lead Qualifier, Call Prep Engine, Proposal Studio, Market Signals, Activity Feed, Saved Projects, Reference Library, and Settings. The main content area is titled 'MOVE CA ENGINE' and includes a subtitle 'Qualify the lead, prep the call, build the proposal, read the market.' It features a 'Proposal Studio' section with a progress bar showing steps from 'Upload Notes' to 'Export'. The current active proposal is for 'Example Brand Co' and includes a draft waiting for human approval. To the right, there are 'Extracted Discovery Insights' such as Revenue Range (\$10M to \$25M), SKU Count (150 to 300 SKUs), Timeline, Regions, and Budget Signals. At the bottom, there are three summary cards: 'Lead Qualifier' with a 100 Fit Score, 'Call Prep Engine' with a battle card ready status, and 'Market Signals' with a 44 Demand Pulse.

1

Lead Qualifier

Is this lead worth my time?

Paste a brand name, a website link, or your notes about a prospect. In seconds you get a clear read on fit — before you invest time chasing it.

- A **fit score out of 100** against Move's ideal client profile, with the reason behind every point.
- A **CRM-ready summary** you can copy straight into your notes, plus a recommended next step.

Use it to decide, at a glance, which leads deserve your energy.

Lead Qualifier

Paste a brand, URL, lead list, or website copy. URLs are fetched live and scored against Move's ICP.

Brand name

Bright Bottle Co

Website URL (fetched automatically)

https://example.com

Pasted notes

DTC insulated drinkware brand on Shopify and Amazon, around \$12M revenue, 180 SKUs. Founder is juggling supplier lead-time slips from two factories in Ningbo, hero-SKU stockouts before summer, and freight quotes that swing 40% between forwarders.

Website copy or product page text (optional)

Optional: paste homepage or product text. Used together with the live website fetch.

Optional short lead list

One brand per line for quick context. V1 scores the primary pasted brand.

Fit Score

high fit

REASONS BEHIND SCORE

- Physical goods model: 20/20 because Bright Bottle Co sells insulated drinkware.
- Market fit: 15/15 because the brand sells through DTC Shopify and Amazon channels.
- Revenue or complexity fit: 20/20 because the brand is around \$12M revenue with 180 SKUs.
- Supply chain pain visibility: 25/25 because the founder is dealing with supplier lead-time slips, hero-SKU stockouts before summer, and freight quote volatility.
- Buyer visibility: 10/10 because the founder is identified as the person currently juggling the operational issues.
- Outreach personalization quality: 10/10 because the summer hero-SKU stockout risk tied to Ningbo factory lead-time slips gives a specific, relevant first-touch angle.

ICP CHECKS

Physical Goods Brand

Bright Bottle Co sells insulated drinkware, which is a physical product catalog.

Market Fit

Bright Bottle Co sells through DTC Shopify and Amazon channels.

Call Prep Engine

Walk into the discovery call ready.

Paste the booking-form answers or intake notes and get a one-page battle card built for the conversation ahead.

- Brand snapshot and a **likely pain map** across sourcing, inventory, logistics and more.
- **10 diagnostic questions** to ask, the service path that probably fits, and a suggested opening angle.
- Clear notes on what to **verify** and what to **avoid** on the call.

Use it to sound prepared and consultative in every first call.

Proposal Studio

From call notes to a polished proposal — the flagship.

Paste your discovery notes. The app pulls out the key facts (you can edit them), then builds the proposal **one section at a time**, in Move's real format: Cover & Context, Package Summary, Timeline, Recommendation, SLA, Scope of Work, and Investment & Next Steps.

- **You approve each section** before it moves on — nothing is finalized without you.
- Every section is **checked against Move's proposal rules** (correct roles, proper tables, consistent pricing, on-brand language) and flags anything to fix.
- It drafts the **companion email** and exports the finished proposal to a clean document.

Use it to turn messy notes into a sendable, on-brand proposal in a fraction of the time.

Cover and Context

Proposal for Example Brand Co

Move Supply Chain will support Example Brand Co in creating a clearer operating rhythm before the next purchase order. The focus is on improving planning confidence across demand planning, supplier lead times, MOQs, freight cost exposure, and limited inventory visibility at the US 3PL. This work is intended to help the Founder and team make more practical supply chain decisions as the business continues launching new products quickly across Shopify, Amazon, and retail.

Key Pain Points

- Example Brand Co is launching new products quickly, which is creating supply chain friction across planning and execution.
- Supplier lead times are creating friction and may affect purchase order timing and launch readiness.
- MOQs are creating friction and may affect purchasing decisions, inventory exposure, and cash planning.
- Demand planning is creating friction, making it harder to place the next purchase order with confidence.
- Freight cost is creating friction and may be affecting landed cost visibility and operating decisions.
- The current warehouse setup is a US 3PL with limited inventory visibility, which may make planning and replenishment decisions harder.
- The Founder is still involved in supply chain decisions, suggesting supply chain execution may still require senior leadership attention.
- Example Brand Co is operating at \$10M to \$25M in revenue with 150 to 300 SKUs across Shopify, Amazon, and retail, which increases the need for a clearer planning cadence.

4

Market Signals

Read the room your clients are selling into.

A live read on the demand environment Move's DTC clients face, so your outreach is timely and market-aware.

- A **Demand Pulse** score with a plain-English read on whether conditions are heating up or cooling down.
- Key indicators (consumer sentiment, disposable income, energy costs and more), each explained in one sentence.
- A **Campaign Signal** with ready-to-post angles written from that week's actual numbers — never invented.

Use it for timely outreach hooks and market-aware talking points.

Good to know

- **The AI is always labeled.** A green “Live AI” tag means a real model wrote it; an amber “Fallback” tag means the built-in logic did. You'll never confuse the two. It also runs a primary AI with an automatic backup, so it keeps working if one provider is down.
- **You're always in control.** The app drafts; you decide. Nothing is sent automatically, and proposals require your section-by-section approval.
- **It doesn't make up numbers.** Market figures come from public data (the Fed's FRED, Yahoo Finance); proposals are grounded in your notes and Move's real playbooks.
- **“Cached” market data is not stale.** It means the latest published figures are reused rather than re-downloaded each visit. Those indicators update monthly or quarterly, so it's current — and Refresh pulls the very latest on demand.
- **Your work saves in your browser — for now.** In this version, projects live on the browser you're using; they aren't shared across devices or teammates yet. Use Export JSON to back up or move your work.

How to use it

- 1 Open the app and enter the **shared team access code** (ask Omar).
- 2 Pick a tool from the left sidebar.
- 3 Paste your input, generate, review and tweak, then copy or export.

WHAT'S NEXT

A shared team URL so everyone works off the same place, saved projects that sync across people and devices, PDF upload for discovery notes, and branded PDF / Word proposal export.

Questions or feedback? Send them to Omar — this is an early internal version, and your input shapes where it goes.
